

CURTIS Entschäumer AF 650

Description

CURTIS Entschäumer AF 650 is an anti-foaming agent of hydrogen carbons, waxes and non-ionic emulsifiers.

Technical data

	concentrate
colour:	Yellowish, cloudy
density (15 °C):	0,84 g/cm ³
pH-value (2%):	5 - 6

Operational areas / Applications

CURTIS Entschäumer AF 650 is used as a defoamer in water-miscible fluids (central systems, single machines).

The addition should be made at suitable system components, which have the possibility of turbulence and mixing.

Dosage:

The typical use concentrations of **CURTIS Entschäumer AF 650** are in the range of 0,01 to 0,05 %.

The defoaming agent can be added pure or pre-dissolved into the coolant solution/emulsion (e.g. 1:10).

Special features

- ✓ *Si-free*
- ✓ *Hihly effective for mineral oil based emulsions*
- ✓ *Shows no problems in subsequent treatment of the workpieces*
